Polyurethane 1K & 2K

Acrylic 1K

### Solvent Borne

Polyurethane 2K

Acrylic 2K

Nitro 1K

# Lacquers

for interior & exterior surfaces

## Coatings are our passion...

Designing coatings for wooden surfaces means designing products, which protect and finish the wooden surface. From a minimal design with an opaque lacquer where the soft satin finish of the lacquer allows your fingertips to slip off the surface, to a contemporary design with a high gloss lacquer, highlighting the natural wood tones with mirror like reflection.

At Sylac we design, formulate and produce specialty coatings for wooden surfaces, specialising in industrial applications. Our product portfolio of over 12.000 formulations allows us to offer further customized solutions to our partners.

We invite you to experience the coating as a texture and a property that makes the difference!

## Textures...

### soft feel ...awaken your senses

Soft feel lacquers, with smooth silk finishes welcoming the sense of touch while protecting the wooden surface.

### wax satin feel ...deep mat finish

Wax satin finishes form durable, smooth surfaces with enhanced scratch resistance. The natural smooth deep mat finish creates a non-marking surface with professional protection.

### natural wood feel ...open pore

Natural wood feel lacquers highlight the natural beauty of the wood grain. The system offers high surface protection by flowing into the wood pore and sealing it from humidity, and increasing mechanical and chemical resistance.

# Making the difference...

## mirror image ...perfect reflection

High gloss lacquers with **mirror** like reflection. Specially designed to maintain **brilliance** over time, offer extensive **durability**, superior hardness, scratch and chemical resistance. High quality clear and opaque lacquers displaying excellent "distinction of image" in their perfect **reflection**.

## scratch resistance ...ensuring longevity

Scratch resistance of the coating ensures the **longevity** of the surface. Surfaces with high resistance to wear and tear, contain **nanoparticles** which act as hard centres, increasing the surface **hardness**, and protecting the wooden surface.

## wood warmth ...highlighting brilliance

Highlighting the **natural beauty** of the wooden surface with Sylac™, Sylacqua™ & Sylacure™ basecoats and topcoats, specially designed to enhance the color of the wood, highlighting the brilliance of the wood grain and sharing the warmth of the wooden surface.

Product highlights								
Product Name	Application Area	Type	Soft finish	Wax Finish	Natural Feel	Mirror Image	Scratch Resistance	Wood warmth

# Sylac

Varnish & Coating Technology  
for wooden surfaces

## Reaching our Goal

At Sylac we design, formulate and produce speciality coatings for wooden surfaces. We focus on industrial applications, designing products, which provide solutions for ever application.

At the forefront of technological developments in the varnish and coating industry, we promise advanced systems, addressing customer needs and requirements. We place special focus and consideration on product development, designing new products every day.

Our product portfolio holds over 12000 formulations, rapidly increasing each day. With our extensive knowledge base we can offer further customised solutions, technical know-how and support.

## Certification

Sylac is certified by ISO 9001:2008 Quality System Standard for the design, formulation and production of high quality products using the latest quality standards set by industry and regulators.
